# 1. Introduction

The Tasty Bite(Food Reviewing System) is a web-based application designed to provide a platform for users to share their experiences about food items, hotels, and restaurants. In today's digital world, people rely heavily on online reviews before making decisions about where to eat or which restaurant to visit. This system serves as a centralized place where food lovers can register, log in, post reviews, and rate dishes or hotels.

The system also includes an admin module that allows administrators to monitor user activities, manage reviews, and ensure that only valid and useful information is available to the public. By maintaining proper management, the system promotes reliability and helps both customers and restaurant owners.

For customers, the system provides authentic reviews and ratings that help them make better decisions. For restaurants and hotels, it offers valuable feedback to improve food quality and services. The application is developed using PHP, MySQL, HTML, CSS, and JavaScript, making it user-friendly, secure, and scalable.

In short, the Food Reviewing System is not only a review portal but also a community-driven solution that enhances food culture by connecting customers and service providers through feedback and rating.

## Technologies Used

1. **Front-End Technologies** ○ **HTML5**: Used for creating the structure of the web pages and forms (e.g., login, register, review submission). ○ **CSS3**: Provides styling, layout, colors, and responsive design for better user experience. ○ **JavaScript**: Used for client-side validation, interactive elements, and dynamic page updates.
2. **Back-End Technologies** ○ **PHP (Hypertext Preprocessor)**: The core server-side scripting language used to handle user requests, manage sessions, and perform database operations.
    - **XAMPP/WAMP Server**: Local server environment used to run and test the project with Apache, PHP, and MySQL.
3. **Database** ○ **MySQL**: Relational database used to store user details, reviews, ratings, hotel and food item information.
4. **Additional Tools** ○ **phpMyAdmin**: For easy management of the MySQL database. ○ **Visual Studio Code / Sublime Text**: Code editor used for writing and maintaining the project.
    - **Browser (Chrome/Edge/Firefox)**: For testing and running the web application.

## Objectives of the Tastybite(Food Reviewing System)

1. To provide a user-friendly platform for posting and reading food reviews.

2. To allow users to register and securely login.

3. To help customers in making informed food choices.

4. To allow administrators to manage reviews efficiently.

5. To store and retrieve food-related data securely in the database.

# Database Design

Database Name: `food_review_db`

---

# 1. users Table

Stores details of registered users.

| Column Name | Data Type | Constraints | Description |
|---|---|---|---|
| user_id | INT (AUTO_INCREMENT) | PRIMARY KEY | Unique ID for each user |
| username | VARCHAR(50) | UNIQUE, NOT NULL | Username for login |
| password | VARCHAR(255) | NOT NULL | User password (hashed/plain in your code) |
| email | VARCHAR(100) | UNIQUE, NOT NULL | User email |
| created_at | TIMESTAMP | DEFAULT CURRENT_TIMESTAMP | Registration date |

---

# 2. admin Table

For system administrators.

| Column Name | Data Type | Constraints | Description |
|---|---|---|---|
| admin_id | INT | PRIMARY KEY | Unique ID for each |

(AUTO_INCREMENT) admin

| Column Name | Data Type | Constraints | Description |
|---|---|---|---|
| username | VARCHAR(50) | UNIQUE, NOT NULL | Admin username |
| password | VARCHAR(255) | NOT NULL | Admin password |

---

# 3. hotels Table

Stores information about hotels/restaurants.

| Column Name | Data Type | Constraints | Description |
|---|---|---|---|
| hotel_id | INT (AUTO_INCREMENT) | PRIMARY KEY | Unique ID for each hotel |
| hotel_name | VARCHAR(100) | NOT NULL | Name of the hotel/restaurant |
| location | VARCHAR(150) | NULL | Location/Address |
| created_at | TIMESTAMP | DEFAULT CURRENT_TIMESTAMP | Record created date |

---

# 4. dishes Table

Stores food items available for review.

| Data Type Name | Constraints | Description |
|---|---|---|

| Column | | | |
|---|---|---|---|
| dish_id | INT (AUTO_INCREMENT) | PRIMARY KEY | Unique ID for each dish |
| dish_name | VARCHAR(100) | NOT NULL | Name of the dish |
| hotel_id | INT | FOREIGN KEY (hotel_id) | Linked with hotels table |
| created_at | TIMESTAMP | DEFAULT CURRENT_TIMESTAMP | Record created date |

---

# 5. reviews Table

Stores reviews given by users.

| Column Name | Data Type | Constraints | Description |
|---|---|---|---|
| review_id | INT (AUTO_INCREMENT) | PRIMARY KEY | Unique ID for each review |
| user_id | INT | FOREIGN KEY (users.user_id) | Reviewer's ID |
| dish_id | INT | FOREIGN KEY (dishes.dish_id) | Dish being reviewed |
| rating | INT (1–5) | NOT NULL | Rating given by user |
| review_text | TEXT | NOT NULL | Review message |

**Data Type Constraints Description Name**

| Column | | | |
|---|---|---|---|
| created_at | TIMESTAMP | DEFAULT CURRENT_TIMESTAMP | Review submission date |
